

Contents

Preface

1 Introduction and the Institutional Environment

- 1.1. Introduction
- 1.2. The Stock Market Efficiency Question
- 1.3. Some History
- 1.4. The Role of Financial Information in the Market Efficiency Question
- 1.5. The Role of Organized Markets in the Market Efficiency Question
- 1.6. The Role of Trading in the Market Efficiency Question
- 1.7. The Role of Securities Market Regulation in the Market Efficiency Question
- 1.8. The Role of Stock Market Indicators in the Market Efficiency Question
- 1.9. Summary
- References

2 Some Conventional Building Blocks (With Various Reservations)

- 2.1. Introduction
- 2.2. The St. Petersburg Paradox
- 2.3. von Neumann-Morgenstern Utility
- 2.4. Creating a “St. Petersburg Trust”
- 2.5. Some Problems with Aggregate Choice Behavior
- 2.6. Jeffersonian Realities
- 2.7. Conclusions
- Problems
- References

3 Diversification and Portfolio Selection

- 3.1. Introduction
- 3.2. Portfolio Design as Constrained Optimization
- 3.3. A Graphical Depiction
- 3.4. Other Approaches: Confidence Limits and Stochastic Dominance
- 3.5. Non-Utility Techniques
- 3.6. Portfolio Rebalancing
- 3.7. The Time Indexed Distribution of Portfolio Value
- 3.8. Negatively Correlated Portfolios
- 3.9. Bear Jumps
- 3.10. Conclusions
- Problems
- References

4 Capital Market Equilibrium Theories

- 4.1. Introduction: The Capital Market Line
- 4.2. The Security Market Line
- 4.3. The Sharpe Diagonal Model
- 4.4. Portfolio Evaluation and the Capital Asset Pricing Model (CAPM)
- 4.5. Arbitrage Pricing Theory (APT) and Fama-French (FF)
- 4.6. Interaction of Equilibrium and Efficiency
- 4.7. Expectations, Convergence, and the Efficient Market Hypothesis
- 4.8. Conclusions
 - Problems
 - References

5 Equilibrium Implying Efficiency: The Neoclassical Fantasy

- 5.1. Introduction
- 5.2. A Formal Restatement of the Hypothesis
- 5.3. Who Are The EMH Investors?
- 5.4. Some Early History
- 5.5. Science and the “Social Sciences”
- 5.6. Risk versus Uncertainty
- 5.7. The 1960s and 1970s
- 5.8. The Weak Form of the EMH
- 5.9. The Semi-Strong Form of the EMH
- 5.10. An Example of “Soft” Results Becoming “Conclusive”
- 5.11. Other Studies
- 5.12. Intertemporal Analyses
- 5.13. More Evidence That Markets Are Not Efficient
- 5.14. Conclusions
 - Problems
 - References

6 More Realistic Paradigms for Investment

- 6.1. Introduction
- 6.2. Growth
- 6.3. Rational Valuation and Growth
- 6.4. Momentum and Growth
- 6.5. An Application
- 6.6. The “Risk Profile” Approach to Stock Selection
- 6.7. The “Risk Profile” Approach After-Taxes and Transactions Costs
- 6.8. Realistic Capital Market Theory
- 6.9. Conclusions
 - Problems
 - References

7 Security Analysis

- 7.1. Introduction
- 7.2. Financial Statement Analysis
- 7.3. Ameritape, Inc.

- 7.4. The Auditor's Opinion
- 7.5. The Historical Record
- 7.6. Notes to the Financial Statement
- 7.7. The Most Recent Year and Ratio Calculations
- 7.8. Other Information
- 7.9. Projections and Evaluation
- 7.10. Forecasting
- 7.11. Data Analysis of Ameritape, Inc.
- 7.12. Conclusions
 - Problems
 - References

8 Empirical Financial Forecasting

- 8.1. Introduction
- 8.2. Forecasting as Regression
- 8.3. Data Analysis of Ameritape, Inc.
- 8.4. Conclusions
 - Problems
 - References

9 Stock Price Growth as Noisy Compound Interest

- 9.1. Introduction
- 9.2. Stock Progression Using Binomial Trees
- 9.3. Estimating μ and σ
- 9.4. Time Indexed Risk Profiling
 - 9.4.1. Investing In A Sure Thing
 - 9.4.2. Investing In an Index Fund
 - 9.4.3. Time Based Risk Profiling
- 9.5. A Resampling Approach
 - 9.5.1. A Partially Privatized Social Security Plan
 - 9.5.2. Index Funds As High Interest Paying Money Market Accounts
 - 9.5.3. Gaussian Model versus Resampling
- 9.6. Stock Progression Using Differential Equations
 - 9.6.1. Ito's Lemma
 - 9.6.2. A Geometric Brownian Model for Stocks
- 9.7. Conclusions
 - Problems
 - References

10 Investing in Real World Markets: Returns and Risk Profiles

- 10.1. Introduction
- 10.2. Ameritape Revisited
- 10.3. Forecasting: A Reality Check
- 10.4. Other Scenarios
- 10.5. The Time Indexed Distribution of Portfolio Value
- 10.6. Negatively Correlated Portfolios
- 10.7. Bear Jumps
- 10.8. Conclusions

Problems
References

11 Common Stock Options

11.1. Introduction
11.2. Black–Scholes and the Search for Risk Neutrality
 11.2.1. A Game Independent of the Odds
 11.2.2. The Black–Scholes Hedge Using Binomial Trees
11.3. The Black–Scholes Derivation Using Differential Equations
11.4. Black–Scholes: Some Limiting Cases
11.5. Conclusions
 Problems
 References

12 The Black–Scholes Derivation Using Differential Equations

12.1. The Purpose of This Book
12.2. Summary
12.3. Conclusions
 Assignment
 References

Appendix A A Brief Introduction to Probability and Statistics

A.1. Craps: An Intuitive Introduction to Probability and Statistics
 A.1.1. Random Variables, Their Means and Variances
A.2. Combinatorics Basics
A.3. Bayesian Statistics
 A.3.1. Bayes Theorem
 A.3.2. A Diagnostic Example
A.4. The Binomial Distribution
A.5. The Uniform Distribution
A.6. Moment–Generating Functions
A.7. The Normal (Gaussian) Distribution
A.8. The Central Limit Theorem
A.9. The Gamma Distribution
A.10. Conditional Density Functions
A.11. The Weak Law of Large Numbers
A.12. The Multivariate Normal Distribution
A.13. The Wiener Process
A.14. The Poisson Process and the Poisson Distribution
 A.14.1. Simulating Bear Jumps
A.15. Parametric Simulation
 A.15.1. Simulating a Geometric Brownian Walk
 A.15.2. The Multivariate Case
A.16. Resampling Simulation
 A.16.1. The Multivariate Case
A.17. A Portfolio Case Study
A.18. A Simple Optimization Algorithm That (Usually) Works

Appendix B Statistical Tables

B.1. Tables of the Normal Distribution

B.2. Tables of the Chi-Square Distribution

Index
