

# TABLE OF CONTENTS

## Chapter 1 Euclidean space

- A. The basic vector space
- B. Distance
- C. Right angle
- D. Angles
- E. A little trigonometry
- F. Balls and spheres
- G. Isoperimetric inequalities

## Chapter 2 Differentiation

- A. Functions of one real variable
- B. Lengths of curves
- C. Directional derivatives
- D. Pathology
- E. Differentiability of real-valued functions
- F. Sufficient condition for differentiability
- G. A first look at critical points
- H. Geometric significance of the gradient
- I. A little matrix algebra
- J. Derivatives for functions  $\mathbb{R}^n \rightarrow \mathbb{R}^m$
- K. The chain rule
- L. Confession
- M. Homogeneous functions and Euler's formula

## Chapter 3 Higher order derivatives

- A. Partial derivatives
- B. Taylor's theorem
- C. The second derivative test for  $\mathbb{R}^2$
- D. The nature of critical points
- E. The Hessian matrix
- F. Determinants
- G. Invertible matrices and Cramer's rule
- H. Recapitulation
- I. A little matrix calculus

## Chapter 4 Symmetric matrices and the second derivative test

- A. Eigenvalues and eigenvectors
- B. Eigenvalues of symmetric matrices
- C. Two-dimensional pause
- D. The principal axis theorem
- E. Positive definite matrices
- F. The second derivative test
- G. A little matrix calculus

## Chapter 5 Manifolds

- A. Hypermanifolds
- B. Intrinsic gradient-warm up
- C. Intrinsic critical points
- D. Explicit description of manifolds
- E. Implicit function theorem
- F. The tangent space
- G. Manifolds that are not hyper

## Chapter 6 Implicit function theorem

- A. Implicit presentation
- B. Rank
- C. Implicit function theorem
- D. Results
- E. Parametric presentation
- F. The explicit bridge
- G. The derivative reconsidered
- H. Conformal mapping
- I. Examples of conformal mappings

## Chapter 7 Cross product

- A. Definition of the cross product
- B. The norm of the cross product
- C. Triple products
- D. Orientation
- E. Right hand rule
- F. What *is*  $SO(3)$ ?
- G. Orientation reversal

## Chapter 8 Volumes of parallelograms

- A. Volumes in dimensions 1, 2, 3
- B. The Gram determinant
- C. Volumes in all dimensions
- D. Generalization of the cross product

## Chapter 9 Integration on $\mathbb{R}^n$

- A. The idea of Riemann sums
- B. Step functions
- C. The Riemann integral
- D. Sufficient conditions for integrability
- E. The fundamental theorem
- F. The Fubini theorem
- G. Iterated integrals
- H. Volume
- I. Integration and volume

## Chapter 10 Further investigation of integration

- A. Topological background
- B. Topological characterization of contentedness
- C. Integration over more general sets
- D. Cavalieri's principle
- E. Elementary matrices
- F. Linear changes of variables
- G. The general formula for change of variables
- H. The gamma function
- I. Notation for the Jacobian determinant

## Chapter 11 Integration on manifolds

- A. The one-dimensional case
- B. The general case
- C. Hypermanifolds
- D. The Cauchy-Binet determinant theorem
- E. Miscellaneous applications

## Chapter 12 Green's theorem

- A. The basic theorem of Green
- B. Line integrals
- C. A general Green's theorem
- D. Areas by means of Green
- E. Conservative vector fields
- F. Sufficiency
- G. A slick proof of sufficiency

## Chapter 13 Stokes' theorem

- A. Orientable surfaces
- B. The boundary of a surface
- C. Inherited orientation
- D. The basic calculation
- E. The basic theorem, curl
- F. Stokes' theorem
- G. What *is* curl?
- H. Curlometer
- I. Conservative fields revisited

## Chapter 14 Gauss' theorem

- A. Green's theorem reinterpreted
- B. Gauss' theorem for  $\mathbb{R}^n$
- C. The proof
- D. Gravity
- E. Other differentiation formulas
- F. The vector potential

## Chapter 15 $\nabla$ in other coordinates

- A. Biorthogonal systems
- B. The gradient
- C. The divergence
- D. The curl
- E. Curvilinear coordinates
- F. The gradient
- G. Spherical coordinates
- H. The divergence
- I. The curl

- J. Orthogonal curvilinear coordinates
- K. The Laplacian
- L. Parabolic coordinates
